**INFORMATION CAPITAL ADDS THE LADYBRIDGE OPENQM DATABASE TO ITS WTK™ WEB TOOLKIT**

NASHVILLE, December 16, 2009 – Information Capital (InfoCap) has added Ladybridge Systems' OpenQM to the databases compatible with its 4GL, fourth-tier WTK application development tool.

OpenQM is a leader in the multidimensional database market. It is continuously upgraded with features such as object-oriented programming, a paradigm that uses the attributes and behaviors encapsulating an entity, together with their interactions, to design applications and computer programs.

In a joint, year-long effort with Ladybridge, InfoCap technicians and programmers in Illinois, New York, Arkansas, and Texas worked to perfect a design methodology for seamlessly converting over one hundred thousand programs from the WTK Web Toolkit to run on the OpenQM platform.

The OpenQM - WTK combination enables Information Capital companies to provide their clients the enhanced productivity made possible by the rapid evolution of mobile broadband and inexpensive netbooks and handsets.

**About Information Capital**

Information Capital ([www.information-cap.com](http://www.information-cap.com)) is a systems integrator specializing in the development and integration of local government data processing solutions. Its six affiliated companies have served the needs of over 400 local government clients throughout the United States since 1981. Information Capital has offices in Nashville, Tennessee; Houston and Austin, Texas; and Little Rock, Arkansas.

**About Ladybridge Systems**

Ladybridge Systems ([www.openqm.com](http://www.openqm.com)) expanded its activities from training, consultancy, development, and maintenance services for multivalue database users to focus on the OpenQM database product when it was publicly launched in 2001. The company, headquartered at 17b Coldstream Lane, Hardingstone, Northampton NN4 6DB England, is a member of the TRUST Group, an integrated network of independent computer companies.
