

Five reasons to consider migrating your MultiValue application to OpenQM

- 1 | Price**

A low licence fee and no mandatory support contracts results in a ten year total cost of ownership that may be less than 20% of what you pay now, easing the strain on ever tightening budgets.
- 2 | Compatibility**

Migration from your existing system should be painless. OpenQM has options to enable close compatibility with the other major multivalued products.
- 3 | Support**

On those occasions when you do need help, our support services are among the most responsive in the industry. With 60 days free support followed by a simple pay per incident support scheme, you do not pay for the service unless you need it. Pre-paid schemes are available for those who prefer them.
- 4 | Innovation**

We have taken the standard multivalued model and extended it in response to the needs of our users. Features such as object oriented programming and availability of OpenQM on Mac and PDA allow you to move forwards whilst retaining the benefits of the multivalued data model.
- 5 | Development**

QM comes with the full AccuTerm terminal emulator at no extra charge. We also recommend use with the DesignBais web tools, mv.NET and Nucleus. The QMClient API removes the need for many other middleware products.

"With 23 years in developing multivalue applications, QM/Linux is the finest platform I've used and the most cost-effective. Support is outstanding."

— **William G. Crowell**, Pavuk Systems

Key Features of OpenQM include:

- High performance, self tuning file system with B-tree based indexing
- 128, 192 and 256 bit data encryption at record or field level
- QMNet for access to QM files on remote servers
- Virtual File System for access to alien file structures
- Object oriented programming fully integrated into QMBasic
- Many development and diagnostic tools

A four user, 30 day evaluation licence is available without charge.
