

# OpenQM

## Taking MultiValue where it has never gone before

### Why OpenQM?

If you have an existing MultiValue application or are about to start developing a new application, OpenQM may be the solution you have been seeking. OpenQM offers a high-performance, modern database environment with an extremely efficient footprint at a price that is 75% less for both licenses and maintenance.

OpenQM has long sought to revolutionize the MultiValue industry, taking MultiValue to new heights of performance and expectation. OpenQM support and maintenance is now available for the first time directly from Zumasys, one of the largest development and engineering teams in the MultiValue market. With technical support engineers located across the United States and England, you'll always be able to reach someone who knows the importance of keeping your MultiValue application up and running.

Our software developers, technical support engineers, infrastructure experts, and cloud engineers will work with you to support, protect, and modernize your OpenQM database— whether on site or in the cloud. Our cloud platform is optimized for MultiValue database applications using industry-leading technologies from VMware, NetApp, and Cisco, and housed in the world's most secure data center, The SuperNAP, managed by expert engineers who understand your business. We take care of everything including backups, system administration, and monitoring so you can focus resources on your core business while maintaining complete control of your data and applications.

### OpenQM in the Cloud

The Zumasys cloud platform has been optimized with Flash memory at multiple tiers to address the disk I/O requirements of OpenQM and other MultiValue databases. If you're interested in leveraging the efficiency, security, and performance of MultiValue in the cloud, Zumasys can help.

Since 2006, Zumasys has provided enterprise-class cloud hosting for Oracle, SQL and Pick MultiValue applications. We have the depth and experience to keep your systems running. For more information on our architecture, monitoring and customer references, visit [www.zumasys.com/cloud](http://www.zumasys.com/cloud).

### OpenQM at a Glance

OpenQM began in 1993 as an embedded database from Ladybridge Systems. It was released in its own right in mid-2001 on Windows systems and extended to Linux in 2003 and FreeBSD in 2004.

In 2015, OpenQM announced a partnership with Zumasys to provide worldwide distribution, to create a comprehensive telephone support/maintenance program and to multi-tenant OpenQM on the Zumasys Cloud. This allows customers to quickly provision OpenQM servers in the cloud and benefit from a convenient, affordable monthly fee for the database, operating system and underlying infrastructure.

### 5 Benefits

- **Reduce TCO**  
Lower total cost of ownership up to 20% compared to other MultiValue database applications
- **Improve performance**  
High-performance database with minimal footprint
- **Streamline transition**  
Ensure a smooth migration from existing systems
- **Rely on Zumasys support**  
Access technical support from Zumasys
- **Enable cloud services**  
Leveraging the Zumasys Cloud Platform to take your MultiValue database to the cloud

## Key Features

- High-performance, self-tuning file system with B-tree based indexing
- 128-, 192- and 256-bit data encryption at record or field level
- QMNet for access to OpenQM files on remote servers
- Virtual File System for access to alien file structures
- Object-oriented programming fully integrated into QMBasic
- Development and diagnostic tools
- Object-oriented programming
- Exception handling
- Bundled with AccuTerm, a leading terminal emulator

## The best of both worlds— OpenQM is Now Backed by Zumasys Support

### Finally a database that evolves as fast as your application

**Compatible**  
Migration from your existing system is painless since OpenQM has close compatibility with other major MultiValue products

**Agile**  
Applications are developed using QMBasic—an easy-to-learn programming language that provides powerful data manipulation operations

**Powerful**  
MultiValue is well established as a proven technology that can handle big data and the complexity of today's applications

**Scalable**  
OpenQM scales from single user systems to those running very large user communities

"After looking in the multi-valued marketplace for a contemporary platform, we recently transitioned over 100,000 programs to run on QM. We found QM to be a solid and reliable development that made our transition easier than anticipated."

**Ethan Crawford**  
Information Capital

## About Zumasys

Zumasys helps companies of every size transition their infrastructure and applications to the cloud. With Zumasys cloud services, customers can easily access the latest software and hardware technologies over the Web, allowing them to focus on growing their core business instead of managing their IT infrastructures. Zumasys delivers personalized service, integrated disaster recovery and the confidence companies need to outsource the hosting of all their applications, including legacy MultiValue systems.
